

(a) Reset shifts the first post-reset slot

first post-reset slot

Expected continuation

Observed after reset

off-by-one $\Rightarrow$ wrong buffer op

(b) Expected vs. observed execution

Expected

one accumulation window

G1 (id=0)

G2 (id=0)

accumulate

accumulate

buffer = state + G1 + G2

Observed after reset

spurious window boundary

G1 (id=0)

G2 (id=1)

accumulate

copy

discarded

buffer = G2

G1 discarded · missing check: buffer op must match accumulation phase
